These tools are required

- 8

Power drill - cordless recommended.
- 9

Drill to fit locally obtained fastener.
- 10

13mm wrench
- 11

Wrench or other tool(s) to install locally obtained fasteners
- 12

#2 Phillips screwdriver
- 13

Ratchet driver with extension and 7/16" socket.
(Also used to adjust tension of tilt mechanism. See label on door.)

IMPORTANT NOTES:

Read through these instructions before beginning work to familiarize yourself with the various components. Install the fixtures in the bowl before attaching the bowl to the metal base. You may need to work with a helper to install these units. Any conformance with LOCAL CODES or INSPECTIONS is the RESPONSIBILITY OF THE PURCHASER.

1. Install the hose receiver. To make hose receiver installation easier, complete these steps to cut screw threads in the hose receiver mounting holes:
 - Take a mounting screw and drive it 2 or 3 turns into one hole. **DO NOT OVERTIGHTEN.**
 - Remove the screw.
 - Repeat for all four (4) mounting holes.
2. Place the hose receiver gasket on the bottom of the hose receiver. Place the hose receiver onto the bowl.
3. Fasten the hose receiver to the bowl with four screws and the bracket. Be sure the embossed corners of the bracket are against the underside of the bowl (facing up).

4. Apply a liberal amount of plumber's putty (available at most hardware stores) around the top of the drain opening.

PLUMBER'S
PUTTY

5. Place the strainer body in the opening, and press it into the plumber's putty.

6. From the underside of the bowl, place the fibre washer over the strainer body. Secure the strainer body with the nut. **DO NOT OVERTIGHTEN.** When the strainer body is tightened securely to the bowl, clean off any excess plumber's putty.

7. Attach the gasket and tailpiece to the strainer body. **DO NOT OVERTIGHTEN.**

8. Install the single-handle fixture.
9. Remove the blue and red button from the front of the handle.
10. Using a small, flat-blade screwdriver, loosen the set-screw in the handle and lift the handle off of the fixture.
11. Apply a bead of silicone sealer around the fixture hole in the bowl.
12. Place the fixture body on the underside of the fixture hole.
13. From the top side of the bowl, screw the escutcheon onto the fixture.
14. Place the handle onto the fixture. Tighten the set screw located in the hole for the button.
15. Replace the button with the red side to the left, blue side to the right.
16. Connect the hot and cold supply lines.

IMPORTANT! To prevent distorting or collapsing the inlet hose on the fixture, use a wrench to hold the connector fitting on the inlet hose when tightening the supply line connection.

IMPORTANT! Code-approved flexible reinforced connector hoses or pipes **MUST** be used to connect the fixture to the hot and cold supply stubs.

17. Assemble the bowl, bellows and tilt-bracket assembly.
18. Stretch the bellows over the tilt bracket assembly.
19. Align the tilt bracket assembly and bellows with four mounting holes on the bottom of the bowl. The springs should be oriented toward the front of the bowl.
20. Fasten the tilt bracket and bellows to the bowl with four hex head bolts provided. A 1/4" - drive or 3/8" - drive ratchet wrench with an extension and 7/16" socket will make this easier. Note that there are four large access holes in the spring side of the bracket assembly.

IMPORTANT NOTES:

It is the responsibility of the purchaser and/or the installer to check local plumbing codes regarding horizontal drains and venting. Local venting codes may prohibit ganging units.

Please read through these instructions before beginning work to familiarize yourself with the various components. You may need to work with a helper to install these units.
